

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application. Please amend claims 1-3 and 5 and add new claims 8-10 as follows:

LISTING OF CLAIMS:

1. (Currently Amended) An organic electroluminescence display device
having at least two comprising:
 - a substrate;
 - a first electrode formed on the substrate;
 - a first organic electroluminescence layers and electrodes layer
provided alternately on an upper layer of an the first electrode formed on a
substrate respectively;
 - a second electrode provided on the first organic electroluminescence
layer;
 - a second organic electroluminescence layer provided on the second
electrode; and
 - a third electrode provided on the second electroluminescence layer,
wherein the electrodes provided on the substrate have an anode and a
cathode formed alternately.
2. (Currently Amended) An organic electroluminescence display device
having at least two comprising:
 - a substrate;
 - a first electrode formed on the substrate;

a first organic electroluminescence layers and electrodes layer
provided alternately on an upper layer of an the first electrode formed on a
substrate respectively;

a second electrode provided on the first organic electroluminescence
layer;

a second organic electroluminescence layer provided on the second
electrode; and

a third electrode provided on the second electrode,

wherein the odd-numbered electrodes which are provided are
connected to a first electrode terminal and the even-numbered electrodes
which are provided are connected to a second electrode terminal.

3. (Currently Amended) The organic electroluminescence display device
according to claim 1, wherein an electrode for transmitting a light which is
electroluminescence light emitted is ~~set to be~~ a transparent electrode, and made of
a) a metal film which is formed of an alkaline metal or an alkaline earth metal, their
metal fluorides, their metal oxides or an alloy of these metals and b) another metal
wherein the electrode is provided on a boundary between any of the electrodes
which is to be the are cathode cathodes and the organic electroluminescence layer.

4. (Previously Presented) An information terminal comprising the organic
EL display device according to claim 1.

5. (Currently Amended) The organic electroluminescence display device according to claim 2, wherein an electrode for transmitting ~~a light which is~~ electroluminescence light emitted is ~~set to be~~ a transparent electrode, ~~and~~ made of a) a metal film which is formed of an alkaline metal or an alkaline earth metal, ~~their~~ metal fluorides, ~~their~~ metal oxides or an alloy of these metals and b) another metal wherein the electrode is provided on a boundary between ~~any of~~ the electrodes which ~~is to be the~~ are ~~cathode~~ cathodes and the organic electroluminescence layer.

6. (Previously Presented) An information terminal comprising the organic EL display device according to claim 2.

7. (Previously Presented) An information terminal comprising the organic EL display device according to claim 3.

8. (New) An information terminal comprising the organic EL display device according to claim 5.

9. (New) An organic electroluminescence display device comprising:
a substrate;
a first electrode formed on the substrate;
a first organic electroluminescence layer provided on an upper layer of the first electrode;
a second electrode provided on the first organic electroluminescence layer;

a second organic electroluminescence layer provided on the second electrode; and

a third electrode provided on the second electrode,

wherein odd-numbered electrodes which are provided are connected to a first electrode terminal and even-numbered electrodes which are provided are connected to a second electrode terminal,

wherein an electrode for transmitting electroluminescence light emitted is a transparent electrode made of a) a metal film which is formed of an alkaline metal or an alkaline earth metal, metal fluorides, metal oxides or an alloy of these metals and b) another metal wherein the electrode is provided on a boundary between the electrodes which are cathodes and the organic electroluminescence layer.

10. (New) An information terminal comprising the organic EL display device according to claim 9.
